SUMMARY

Software Engineer with over 3 years of in developing, deploying, and debugging full-stack applications, with RESTful and microservices architecture using Python, Go, and JavaScript. I have practical experience with modern web frameworks, REST APIs, databases, and DevOps practices. Additionally, I have a strong grasp of data structures, algorithm design, object-oriented programming, software development principles, and agile methodologies. Actively looking for opportunities to leverage my skills to design and build solutions for accessible large-scale systems.

EDUCATION

Michigan Technological University – Master's in Computer Science (GPA: 3.85 / 4.00)

08/2023 - 04/2025

SKILLS

Python, Go, JavaScript, C, C++, TypeScript, SQL, Django, Django Rest Framework, Flask, Node.js, React.js, Next.js, MySQL, PostgreSQL, MongoDB, Git, Docker, Celery, Redis, RabbitMQ, WebSockets, AWS, HTML, CSS, Nginx, Linux, RESTful APIs, OAuth2.0, Sentry, BugSnag, NPM, NGINX, Object-Oriented Design, Data Structures, Algorithms, Database Design and Design Patterns.

EXPERIENCE

Michigan Technological University

Houghton, MI

Graduate Teaching Assistant

08/2024 - 12/2024

- Led weekly C and C++ programming labs for 70+ undergraduates, fostering a collaborative learning environment and providing detailed feedback to improve code quality and problem-solving skills. Developed and implemented bash scripts to automate grading, and ensuring consistent assessment across all student submissions.

ThinkLink

Bangalore, India

Software Engineer II (Consultant)

02/2023 - 06/2023

- Collaborated with multiple teams to design and implement a distributed tracing solution in Golang using BugSnag for error and performance monitoring across 8+ microservices, reducing issue resolution time, and improving end-to-end visibility.
- Initiated code refactoring across microservices, applying SOLID principles and design patterns in Golang to enhance code maintainability and scalability, resulting in a significant reduction in codebase size by adhering to the DRY principle.

Crater.Club

Bangalore, India

Software Engineer II

08/2021 - 01/2023

- Built a real-time chat system with polls and reaction features for a live streaming platform using Django Channels and WebSockets, handling 5k+ concurrent connections efficiently with asynchronous consumers and Redis channel layers. Integrated a NoSQL database for persistent message storage.
- Architected and developed a Pub/Sub-based follow system for streamers, achieving a 99% successful delivery rate of stream notifications using Redis for real-time event processing and Celery for asynchronous tasks.
- Designed and developed an analytics dashboard using RESTful APIs (Django Rest Framework) and a Next.js frontend with Charts.js, providing key streaming KPIs that contributed to a 30% increase in daily active users (DAU).

ThinkLink

Bangalore, India

Software Engineer

10/2020 - 08/2021

- Developed and deployed a modular, scalable multi-tenant wine e-commerce application using a microservices architecture and RESTful APIs, achieving over 90% test coverage with a Test-Driven Development (TDD) approach in Golang.
- Built secure Go-based backend services for payment processing, integrating Stripe and PayPal APIs with OAuth 2.0 authentication. Integrated FedEx APIs to implement shipping functionality, including shipment creation and rate calculation.
- Designed and managed a relational database schema with 20+ tables using Sequelize ORM in Node.js, overseeing migrations, seeding, and versioning.

Codemonk

Bangalore, India

Software Engineer

08/2019 - 09/2020

- Developed and deployed 8+ robust backend applications with RESTful APIs using Django Rest Framework and PostgreSQL. Implemented containerization with Docker and established a CI/CD pipeline in AWS ECS, reducing time-to-production and improving development efficiency.
- Designed and implemented RESTful APIs for the Zoos of Karnataka mobile app under a 3-day deadline, including OTP user authentication, Razorpay payments, and Sentry error monitoring.
- Developed and launched an Electron.js desktop application for zoo operations in low-network environments, featuring offline/online database sync with CouchDB and automated updates. Automated software updates using a CI/CD pipeline to build, test, and deploy new versions via AWS S3.

Software Engineer Intern

03/2019 - 07/2019

- Developed an Electron.js application with a Flask server for automated wildlife image classification from forest trap cameras, providing real-time updates via web sockets. Implemented Docker Compose and established a CI/CD pipeline to streamline the building and deployment of the application and model updates via AWS S3, achieving a 5x reduction in manual effort.
- Built a backend for a hiking mobile app using Django Rest Framework, with OAuth2.0 and JWT for secure user authentication. Developed RESTful APIs for user activity tracking and community features, enabling efficient large file uploads to AWS S3 using multipart upload and integrating the Google Maps API for location tracking and trail mapping.

PROJECTS

OpenOs | Next.js, NextAuth.js, Prisma, tRPC, Tailwind CSS

Developed an AI-powered web platform for data and financial analysis with a 3-person team, and integrated databases, payment gateways, and ML models like GPT and BERT, featuring a natural language interface for creating reports, queries, and forecasts. Launched the app on Product Hunt in May 2023, it ranked as the #3 product of the day.
